Profile

I am currently pursuing my BCA with a strong foundation in computer application and programming languages. With quick learning ability, I am eager to contribute to organisational success in the field of computer science. I am motivated to gain hands-on experience and continue learning and growing in this dynamic field.

Banking System 

- **Description:** Developed a Python-based automated banking system that manages user accounts and transactions. The system automatically starts and stops XAMPP services to run a local MySQL server, where user data is stored and managed.
- **Key Features:**
 - i. Automatic XAMPP Control:** Automates the startup and shutdown of XAMPP services, ensuring that the MySQL server is available only when needed.
 - ii. Database Management:** Automatically creates a 'bank_account' database and 'userdetails' table if they don't exist, facilitating user account management.
 - iii. User Operations:** Implements functionalities for user sign-in, login, deposit, withdrawal, balance checking, transaction history viewing (passbook), and account deletion.
 - iv. Transaction Tracking:** Records each transaction with a serial number, date, type of transaction (deposit/withdrawal), and updated balance, maintaining a detailed passbook for each user.
- **Technologies Used:** Python, MySQL, XAMPP, OS Module
- **Learning Outcomes:** Gained practical experience in automating database operations, managing user data securely, and integrating Python with local server environments. Improved skills in Python scripting, database interaction, and understanding of client-server operations.
- **Project code:** <https://github.com/auyashas/Banking-System> 

Education

2022 – present Kundapura	Bachelor of Computer Applications - CGPA 9.1(as of 3rd Sem) <i>Bhandarkars' Arts and Science College</i>
2020 – 2022 Ujire	PCMC - 84% <i>Sri Dhamasthala Manjunatheshwara PU College</i>
2020 Yadadi Mathyadi	SSLC - 84% <i>Little Star English Medium School</i>
